

ICE^{cube} - A structured pre-briefing tool in trauma

Introductions, role confirmations, ensure PPE donned (name labels)

Clinical synopsis, based on bat call notification

Expected clinical course (e.g. "On the information provided, we need to complete a primary and secondary survey, and aim to be in CT within 15 minutes of arrival").

Equipment & drugs – consider any necessary additions to standard set up – e.g. thoracotomy tray, sedative infusions, blood products etc.

Extras (do you need to notify the trauma consultant, OT, IR, or blood bank, or need additional equipment or resources?)
